Art Unit: 3752

NEW DETAILED ACTION

1. In view of the Appeal Brief filed on October 25, 2006, PROSECUTION IS HEREBY REOPENED. As set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
- (2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

Art Unit: 3752

Defective Appeal Brief

3. The brief does not contain a concise explanation of the subject matter defined in each of the independent claims involved in the appeal, referring to the specification by page and line number, and to the drawing, if any, by reference characters; and/or does not identify the structure, material, or acts described in the specification as corresponding to each claimed function for every means plus function and step plus function for each independent claim involved in the appeal and for each dependent claim argued separately by reference to the specification by page and line number, and to the drawing, if any, by reference characters, as required by 37 CFR 41.37(c)(1)(v). The brief must clearly define the means for mounting the nozzle and the drive means as recited in the claim.

Specification

4. The abstract of the disclosure is objected to because the means for mounting the nozzle as recited is not defined in the specification. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 112

- 5. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 6. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 3752

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: the elements required to mount the nozzle at an upper end of the riser for rotation about an axis.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 8. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Clark (US Patent 5,375,768).

Clark '768 shows a sprinkler comprising a riser 16 for receiving a pressurized fluid, a nozzle 22, means for mounting the nozzle as recited (see Figure 1), a turbine 56 mounted for rotation inside the riser, drive means 26 for connecting the turbine to the nozzle as recited, and a valve that prevents by selectively re-directing the pressurized fluid around the turbine over-spinning of the turbine (column 3, lines 36-54). The valve is capable of preventing the over-spinning regardless of the type of pressurized fluid since it acts on fluid pressures.

Comments

9. Clark '768 states that this sprinkler has a valve 62 that prevents over-spinning of the turbine by selectively re-directing pressurized fluid around the turbine as stated in column 3, lines 36-54. As water pressure increases the valve 62 opens further to

Art Unit: 3752

restrict flow into the turbine and allowing a greater amount of water to flow around and by-pass the turbine. Clark '768 discloses the fluid as water only, however, since Clark '768 states that since this valve 62 operates on pressures, it is fully capable of carrying out the same function regardless of whether the fluid is water, air, or a combination of both and thus formed the basis for the USC 103 obviousness rejection. It is known in the art that sprinklers are "winterized" before the cold weather sets in order to prevent damage to the sprinkler. This is normally done by blowing high pressure air through the sprinkler to expel the residual water in the sprinkler. Thus, during the winterizing process, an operator "selectively" blows air through the sprinkler and under normal operating conditions, an operator "selectively" turns on the water supply to allow the sprinkler to irrigate an area. Clark '768 states in column 3 lines 41-50 that as water pressure increases, valve 62 opens further go restrict the flow of water into the turbine and allowing a greater amount of water to by-pass the turbine which prevents overspinning of the turbine. Thus, since the valve operates on pressure, the valve would open further to allow fluid to bypass the turbine to prevent over-spinning if the fluid was also air or a combination of air and water and as such, one having ordinary skill in the art could expect a reasonable expectation of success.

Conclusion

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Davis D. Hwu whose telephone number is 571-272-4904. The examiner can normally be reached on 8:00-4:30. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Shaver can
